

Visitron Spinning Disk/FRAP

Installed 2012. Inverse spinning disk microscope unit for fast pseudo-confocal imaging, preferably for live applications at ambient temperature. Equipped with laser lines for blue, green, red and far red dyes. FRAP/photomanipulation with all laser lines possible. Fast sCMOS and high-sensitivity EM-CCD camera. Hardware autofocus, multi-positioning and stage-based environmental control, including a fast heater/cooler for temperature shift experiments.
